Projects

Voting App – Backend System

[GitHub Repo](#)

Technology Stack: Node.js, Express.js, MongoDB, Postman

- Developed a RESTful backend with role-based access control using JWT authentication and bcrypt password hashing.
- Enabled users to vote only once and view real-time voting results.
- Implemented secure admin features to manage candidates and restrict voting access.
- Used Postman for comprehensive testing of all API routes and edge cases.

Memory Card Match Game

[GitHub Repo](#) — [Live Demo](#)

Technology Stack: HTML, CSS, JavaScript

- Developed a dynamic two-player memory game with turn-based logic and real-time feedback.
- Engineered automatic score tracking and player turn switching for seamless gameplay.
- Designed an interface using modern CSS for compatibility across devices.
- Utilized DOM manipulation to dynamically reflect the current game state and user actions.
